

PRESS RELEASE

## **New WEATHER GUARD® L-Shaped Transfer Tank is Larger, More Durable**

CRYSTAL LAKE, IL. – April 2007 – Knaack Manufacturing has introduced the new WEATHER GUARD® L-shaped steel transfer tank (Model No. 360-3-01). The new tank provides increased gallon capacity versus current models, along with a new durable design for long-term reliability.

Designed for transporting diesel fuel, the WEATHER GUARD transfer tank has a 110-gallon capacity and a new interior baffle design that reduces non-flammable fluid movement and provides extra tank reinforcement. The 2-inch I.D. filler neck is threaded to accept standard 2-inch threaded pipe.

The WEATHER GUARD transfer tank is constructed of heavy 14-gauge steel and is fully arc-welded, providing long product life. The tank's exterior is protected with a Brite White powder coat finish.

Heavy-duty lifting loops aid with installation, while plate-steel flanges provide secure mounting points. Mounting hardware and one vented filler cap are included.

“The new WEATHER GUARD L-shaped steel transfer tank is the largest of its kind in the industry and provides increased productivity on the jobsite,” said Mike Sover, senior product manager, Knaack Manufacturing. “A lot of in-depth research and development was conducted to provide a reliable and durable transfer tank.”

Knaack Manufacturing makes and markets a complete line of WEATHER GUARD Truck Equipment, including a variety of pickup truck storage boxes and racks, hi-side boxes, underbed boxes and more, all with a superior fit and finish that keeps the contents secure and the vehicle looking good. It also makes and markets WEATHER GUARD Van Solutions and KNAACK Jobsite Storage Equipment. Learn more at [www.weatherguard.com](http://www.weatherguard.com).
